

NAME

bibcop – Style Checker and Fixer of BibTeX Files (.bib)

SYNOPSIS

bibcop [<options>] <.bib file path>

DESCRIPTION

The bibcop tool is a Perl script for checking the quality of BibTeX bibliography files (.bib) and automatically fixing found inconsistencies. It is not only a command line tool, but a LaTeX package, which can check the quality of a .bib file during the rendering of a LaTeX document. All found issues are reported as LaTeX warnings.

OPTIONS

Various options apply:

--version

Print the version of the tool

--help Print the help screen

--fix Auto-fix all issues and print new content to the console

--in-place

When used with --fix, modifies the file in place

--latex Print everything in LaTeX format

--verbose

Print debugging information too
